Sequence 218, Application US/09876997
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Dumas Milne Edwards, Jean Baptiste
APPLICANT: Dougueleret, Lydie
APPLICANT: Jobert, Severin
TITLE OF INVENTION: FULL-LENGTH HUMAN CDNAS ENCODING POTENTIALLY SECRETED PROTEINS
FILE REFERENCE: 78, US4, CIP
CURRENT APPLICATION NUMBER: US/09/876, 997
CURRENT PILING DATE: 2001-06-08
PRIOR APPLICATION NUMBER: US 09/731,872,
PRIOR APPLICATION NUMBER: US 60/187,470
                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120

Patent No. 6783961

GENERAL INFORMATION:
APPLICANT: Dumas Milne Edwards, J.B.
APPLICANT: Duclert, A.
APPLICANT: Duclert, A.
TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
PILE REFERENCE: 59. US2. REG
CURRENT APPLICATION NUMBER: US/09/513,999C
CURRENT APPLICATION NUMBER: US 60/122,487
PRIOR APPLICATION NUMBER: US 60/122,487

PRIOR FILING DATE: 1999-02-26
NUMBER OF SEQ ID NOS: 36681

Patent No. 6703491

GENERAL INFORMATION

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SECTION SET PATENTIN Ver. 2.0

SEQ ID NO 23492

LENGTH: 356
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           APPLICANT: Homburger et al.

Sequence 1, Application US/09727238

Patent No. 6555733

GENERAL INFORMATION:
APPLICANT: Bartsch, et al.
TITLE OF INVENTION: No. 6555733el genes coding for amino acid deacetylases with spec:
TITLE OF INVENTION: acetyl-L-phosphinothricin, their isolation and their use.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2916253 CGGGGCTGCGGCCAAGGTTGGCAGCGTCGATGAACTTGTCCAGCGTGAGGTCGCTGGCGT 2916194 Sequence 39818, Application US/09270767

Patent NO. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nuclea acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 6227

SOFTWARE: Patentin Ver. 2.0
